### Course Overview:

This course covers aspects of Basic casualty care and management for raising or lowering casualties whilst working at height.

### Introduction

The Course is designed for current personnel working at height in the Industrial sector, also newly graduated Rope Access technicians who will be involved in the daily operations at height. It will equip personnel with the necessary skill sets to not only assist their supervisor in a rescue of a casualty but administer First Aid as an individual and perform better casualty management should the need arise.

Candidates will be taught the principles of basic life support skills to sustain a higher survivability rate and proper management of a casualty suspended or injured at height.

Candidates will be taught basic care & treatment of casualties in the event of an accident or emergency at height.
