

## Dropped Objects for Inspection Personnel

In Accordance With DROPS Reliable Securing Revision 003

<b>Course Number:</b>	SURE-0014
<b>Duration:</b>	2 days – Theory and Practical
<b>Course Size:</b>	4 minimum / 12 maximum
<b>Language:</b>	English (Thai translator on request)
<b>Price:</b>	To be confirmed

**Overview:** A comprehensive two day course aimed specifically at inspection personnel that perform third party dropped object surveys. The course covers retention methods in depth; securing devices; classification of equipment; zones and areas of offshore installations and vessels; loading and settlement; lifting equipment requirements; risk assessment and hazard identification.

**Who should attend:** Offshore and onshore inspection personnel who conduct third-party dropped objects surveys in environments such as drilling installations, oil platforms, refineries, factories and other facilities.

### Course Outline:

By the end of the program, participants will be able to:

- Conduct third party dropped object surveys with competency and confidence;
- Understand retention and securing devices and their uses, advantages and disadvantages;
- Understand zones and areas on offshore installations;
- Identify and assess at risk integral and non-integral equipment;
- Compile detailed and accurate reports.
